

METHOD AND SYSTEM FOR OBTAINING INFORMATION UTILIZING USER INTERFACES

Abstract of Disclosure

A method is provided for communicating business information using a network-based system. The system including at least one server coupled to a database and at least one device. The method including creating a plurality of dashboards, storing the dashboards in the database, populating the dashboards using information from the database, and providing the dashboards to a user through the device.

Figures

Figure 1: A diagram illustrating the relationship between the variables x , y , and z . The diagram shows a set of axes with x and y as the primary dimensions, and z as a secondary dimension. The axes are labeled with their respective variables and units. The diagram also shows a set of curves representing the relationship between the variables. The curves are labeled with their respective equations and parameters. The diagram is a 3D plot with axes labeled x , y , and z . The x -axis is horizontal, the y -axis is vertical, and the z -axis is diagonal. The origin is labeled O . The axes are labeled with their respective variables and units. The diagram also shows a set of curves representing the relationship between the variables. The curves are labeled with their respective equations and parameters. The diagram is a 3D plot with axes labeled x , y , and z . The x -axis is horizontal, the y -axis is vertical, and the z -axis is diagonal. The origin is labeled O . The axes are labeled with their respective variables and units. The diagram also shows a set of curves representing the relationship between the variables. The curves are labeled with their respective equations and parameters.
